

***Implementation of an Enterprise Project and  
Portfolio Management (EPPM) tool: challenges  
and benefits***

**Adrian Coull**

# Agenda

Context

Goals

Implementation

Benefits &  
verdict

# About Elopak

\*inclusive 100% of partly owned Joint Ventures

# Project context

Multiple sites

Multiple standards

Multiple systems

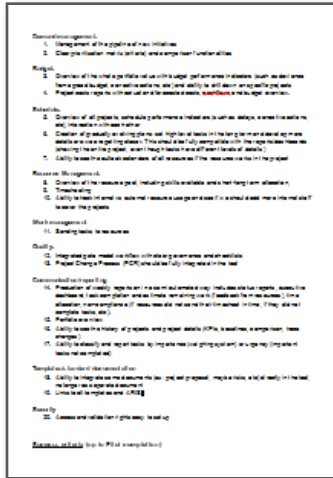

Multiple business areas

# Project goals

# Project initial scope

Long list of functional requirements

Demand management, finance, scheduling, resource management, work management, quality, reporting, etc.

Agreement on 3 focus areas in phase 1:

- Resource management
- Project status reporting
- Demand management

# Project setup

## Organization

- Project owned by Corporate IT
- Business stakeholders represented by main PMOs
- Solution implementation partner: Intersoft AS

## Guiding principles

- Provide value quickly
- Keep to the existing standards and processes
- Out of the box functionalities as much as possible
- Start small and add functionalities progressively

# Project implementation: tool choice

System choice – why Microsoft Project Online?

- Proven actor (Gartner Magic quadrant)
- Familiar system to many users (MS Project)
- Fits our IT landscape
- Fits our philosophy: selected outsourcing
- Quick setup as proof of concept / pilot
- Scale up and down as required
- Possibility to switch to on premise
- Latest and greatest features available immediately\*

\* Delayed implementation possible (ex: 9 months for «Resource engagement») - Review impact with subject matter experts

# Project timeline

# Project experience

Challenges:  
New ways  
of working  
and  
resistance  
to change

## Focus on **quick wins**

- Get the newly defined project KPIs very visible
- Agile approach to requirements: business used sandbox environment to test all functionalities with easy implementation in production
- Get the big project(s) onboard with extended support

## Involve **business champions** (PMOs)

- Promote system and remove obstacles

## Don't underestimate the **training**

- It's not «click and play» for PMO/Project Managers
- Resource capacity management requires enforcement of standards
- Company specific guidelines are essential – «MS project for dummies» is not enough

# Project experience

**FACT:**  
Nobody likes timesheeting

Challenges:  
New ways  
of working  
and  
resistance  
to change

- Work recognition
- Workload under control
- Project custom reports
- Enterprise social network

# Project experience: guiding principles vs reality

Define processes  
before tools

Define tools before  
processes

Out of the box

Custom configuration  
and development

# Project experience: cloud services

## Support on MS Project Online

- Very skilled 3rd level support
- Case description and criticality is essential
- Involvement of 3rd party to qualify issues was important

U.S. ★ EU

**SAFEHARBOR**

U.S. DEPARTMENT OF COMMERCE

## Safe harbor no longer valid

- Requirement to look at EU data model clauses
- Data protection office should be part of the project to facilitate these discussions

# Goals and overall benefits

## 3 focus areas for phase 1:

- Resource management
- Project status reporting
- Demand management

- Better collaboration
- Improved portfolio and pipeline overview
- Standard way of measuring projects
- Simplified system operation
- Fact based discussions on capacity planning
- Improved cross-department finance recharge

# User benefits and potential improvements

## Users

Full EPPM with extensive capacity

Microsoft look and feel and apps development

Timesheeting works well but could be simplified

## PMO

Consolidated portfolio management & KPIs

The tool pushes for standardization

Management of non-project work could be improved

## Administrator

Very stable, always on

(Quite) simple management – no «SQL guru» needed

Project Online limits some configuration and access to logs

## Phase 2 scope

Full capacity management

Improved reporting

## So what is the verdict?

Could I choose MS Project Online again?

Would I do some things differently?

Faster and more agile deployment

More leverage of business champions

Faster endorsement of customization

Focus earlier on capacity management

**Thank you for your attention**
